Publications

In my area peer-reviewed conference publications are the primary outlet for current research. ACM SIGCHI and ACM UIST are the premiere venues for Human Computer Interaction research with an average acceptance rate of 20%. An up-to-date list of publications can be found at: <http://ait.ethz.ch/publications>.

Most important publications: This is a purely subjective list of my three most important papers. These were selected because they illustrate the two main goals of my work: First, I attempt to push the state-of-the art in terms of input recognition algorithmically. Second, I aim to alter accepted limitations on user experiences, by demonstrating entirely novel forms of user interaction through algorithmic design of interactive technologies. Other papers may have received more citations or have had impact in other ways.

- o **In-Air-Gestures** [CF11] – Highly efficient algorithms for gesture recognition on mobile devices, currently achieving best in class accuracy and enabling novel forms of interaction.
- o **DefSense** [CF2] – Computational design of functional flexible, 3D printed input devices.
- o **HoloDesk** [CF14] – Mixed reality system allowing users to manipulate 3D content using uninstrumented freehand interactions.
